

Hi, I am Tassos

- Greek
- Frontend and backend developer
- I believe that less is more

Build Better Joomla Registration Forms

Simplify, Customize, and Integrate with Ease

Limitations of the Joomla Registration Form

- Only one registration form for all user types
- No email confirmation field
- Username and email are separate by default
- Users must create their own password
- Only a single “Full Name” field
- Can’t assign users to different groups based on input
- No way to create accounts conditionally
- Doesn’t integrate with newsletters or CRMs
- Limited display options - can only show via menu item

Overcome Joomla Registration Form Limitations

Option 1: Separate Plugins

Use a plugin for each missing feature

Pros: Only add what you need

Cons: More maintenance, potential conflicts

Option 2: All-in-One Form Builder

Handles all requirements in one extension:
dynamic user groups, conditional logic,
integrations, webhooks, auto passwords

Pros: Cleaner, easier to maintain

Cons: One new tool to learn

Create Custom Registration Form

- Rebuild Joomla's default form in Convert Forms
- Enable user account creation on form submission
- Publish the form on the front-end
- Test submission → Verify email + User created

Use Email as Username

- **Reduce form clutter:** Fewer unnecessary fields shown to the user
- **Less decisions for the user:** No need to invent and remember a separate username
- **Fewer support tickets:** No more “I forgot my username” problem
- **Modern user experience:** Most sites today use email-only login

Auto-Generate Password

- **Faster sign-up:** Removes two password fields from the form
- **Less friction:** Users don't need to invent a strong password upfront
- **No more abandoned forms:** Avoids drop-offs at the “password complexity” step
- **Still secure with reset option:** Require Password Reset ensures users set their own password later

Split Full Name into First & Last Names

- **Personalized emails:** Greet users with {field.fname} like “Hi Maria”
- **Better data management:** Separate fields make sorting and filtering easier
- **Flexible Smart Tags:** Use first/last name individually across Joomla & emails
- **Professional touch:** More polished communication with users

Dynamic User Group Assignment

- **Right access from day one:** Users land in the correct group instantly
- **Save admin time:** No need to manually reassign users afterward
- **Tailored experiences:** Teachers, Students, Parents (or any roles) get the right content
- **Scalable solution:** Works automatically even as your user base grows

Conditional User Creation

- **More flexibility:** Not every form submission has to create an account
- **User choice:** Let visitors decide if they want an account or no
- **Cleaner user list:** Avoid clutter from people who only wanted info/downloads
- **Adaptable logic:** Trigger account creation only when conditions are met

Connect Registration with AcyMailing

- **Capture leads at the right time:** Registration is the perfect moment
- **No extra plugins needed:** Integrate directly without multiple extensions
- **Grow your mailing list automatically:** Every signup adds to your audience
- **Personalize communication:** Map first/last name for better email

Thank you!
